

FIZ CHEMIE Berlin brings out another exciting new Internet search aid

"Chemistry Publishers Guide" - A Novel Search Engine

Berlin, November 1999 - FIZ CHEMIE BERLIN, the German "Chemistry Information Centre", has now added a powerful new search engine to its highly successful family of unique "ChemGuide" search engines available from its Web site "www.fiz-chemie.de". The "Chemistry Publishers Guide" lists Web sites offering world-wide information on publishing houses dealing with chemistry or chemistry-related fields.

The search engine is extremely powerful. With a single query, it is possible to launch a full-text search over thousands of pages on hundreds of servers. A full set of operators allows for sophisticated searching. The retrieved hits can be viewed and checked for relevancy immediately without having to leave the search engine. Once a remote server is selected for further browsing a mouse-click connects directly to this site.
